

The Dream Shuffle

The 3rd year can be a pretty daunting time for most! It's the year when questions like "What if I do not get into my dream college for Master's?", "What if I don't get hired by my dream company?" or even "What after engineering?" haunt the soon-to-be-engineers.

Going by general surveys, in today's engineering community, only a few start pre-planning their life after engineering. The remainder of the students is simply apathetic and put this important introspection on the back-burner. Much as students would like to believe, the "Go-with-the-Flow" approach is not the best for these circumstances. It only leads to uncertainty in one's career. While we do not say that it is a mandate to have your post-engineering career planned to the full stops, we do suggest that you give a substantial thought to your own taste and capabilities and then explore suitable career options.

In our country, for any student, the lack of diversity of choice and correct exposure at the correct time is quite worrisome. More often than not, it is this due to this non-exposure that a student ends up taking unfruitful decisions. We, at Footsteps, wanted to address this problem. By way of the DREAM SHUFFLE workshop, we are looking at creating awareness on diverse career options. The students will be probed into identifying their capabilities and then construct a dream of their own. It is our assurance that each and every student will be guided in developing a plan-of-action for his/her own career.

Target Group: 3rd Year

Duration: 1 Day

Mode of Delivery:

The training will be for a day which will include both classroom and outbound activities. The methodology will include combination of lectures through chalk 'n' talk, presentation, group activities/active learning and role playing and also interactive video sessions with industrial and international engineering experts.

Outcomes

At the end of the program, the students will be able to

1. Understand and realize their capabilities
2. Identify their career options
3. Leverage international opportunities to gain exposure
4. Overcome any challenge with effective action planning
