

Wings to Fly

Finally the 4th year comes knocking at your door! It brings with it a plea to leave the comforts of a college-goer and to soon get acclimatized to the beckoning industry exposure. It is thus very important that a student experiences the industry or corporate environment before kick-starting a career in it. This will make the student feel comfortable and confident about starting his/her career and also, adapt to change with relative ease. Very often, students fail to take control of their career after stepping into it. Call it lethargy or call it cluelessness, most fresher's are seen crumbling under the stress of building their career.

It is necessary that the students figure out approaches to analyze the career options at regular intervals. To zoom ahead in their career, they should be proactive and take charge of it themselves. Through the "Wings to Fly" workshop, students will be introduced to steps that can they can use to channelize their chosen career in the right direction. They will also be taught some career crafting strategies and tools that can be used to build their career on a strong foundation.

Target Group: 4th Year

Duration: 1 Day

Mode of Delivery:

The training will be for a day which will include both classroom and outbound activities. The methodology will include combination of lectures through chalk 'n' talk, presentation, group activities/active learning and role playing and also interactive video sessions with industrial and international engineering experts.

Outcomes

At the end of the program, the students will be able to

1. Identify and list down their ultimate goals and purpose
2. Make decisions on how to utilize resources effectively
3. Determine their future and steps towards it
4. Streamline the set of actions planned
